In architecture, there's a saying, "Less is more." Well, that's fine until you have nothing. In nature, more is more. More species, more niches. More fecundity. Growth is good. This debate between business people and environmentalists is a specious debate. [Along these lines, the famous environmentalist Edward Abbey once said "Growth for the sake of growth is the ideology of the cancer cell."] The question isn't Growth/ No-Growth. The question is "What do you want to grow?" Health or sickness, intelligence or stupidity, prosperity or poverty. When nature grows something we say "That's good." When a tree grows that's good. Wouldn't it be marvelous if when humans made something, we could say, "That's good." Well that would mean we'd have to follow the laws of nature. There's fecundity here. - William McDonough from Cradle to Cradle
